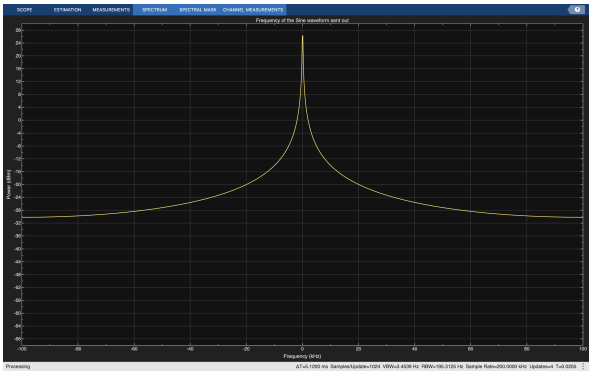

Figure 1: the sinusoidal signal that was sent

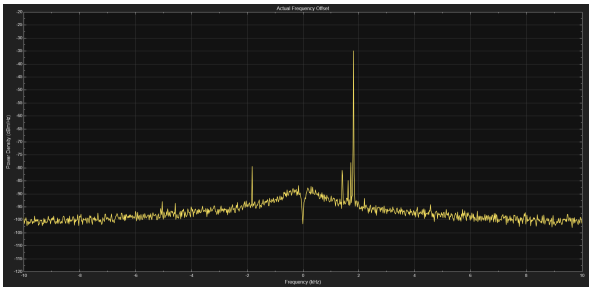

Figure 2: the sinusoidal signal that was received

1 Introduction

Our project is about discovering how to make a communication between computers via antennas. To do that, we use with antennas that we can manage with Matlab on our computer.

2 Get started, our first transmission

The first step was to send a single sinusoidal signal from one computer to the other. Then we analyze it with a spectrumanalyzer. The results are shown in 1 and 2.
